(54) Title: IMPROVED SERVER. COMPUTERIZED NETWORK INCLUDING SAME, AND METHOD FOR INCREASING A
LEVEL OF EFFICIENCY OF A NETWORK

(57) Abstract: A data access engine 22, computerized system 20 and method 40 for increasing a level of efficiency of a network server are disclosed. Data access engine 22 located in first data processing machine 21 is capable of communication with at least one pseudo server 28 located in a second data processing machine 27 (i.e. LAN server 26). The physical separation between data access engine 22 and the server logic and interface of pseudo server 28 is a distinguishing characteristic of the invention. Any request for a subset of data stored in data access engine 22 must be routed through at least one pseudo server 28.
